## Enterprise Real-World Data Product

**Providing a dynamic longitudinal view of the oncology patient journey to support needs across your enterprise from discovery through post-approval**

The oncology treatment landscape continues to change at a rapid rate and understanding the patient journey is increasingly important to answer questions around the impact of therapeutic innovation and intervention over time. Ontada's Enterprise Real-World Data Product is a deeply curated, dynamic, longitudinal product, consisting of de-identified patient-level real-world oncology data, both structured and unstructured, from our single source EHR, iKnowMed. It offers a patient view beginning with newly diagnosed early-stage disease with follow-up for 5 years or until death. This fully enhanced research ready data product will be able to facilitate and address end-to-end real-world research studies across your organization.

- Delivers a comprehensive set of variables including outcomes to provide specificity and clinical depth
- Availability of early-stage data provides insight into all of the factors that influence patients' outcomes and the treatments and services that they receive along the way
- Utilizes a common data model to provide transparency and reliability
- Linkable with external data like claims, genomics and SDOH for advanced research insights

## Generating insights and capturing real-world outcomes and endpoints to help understand areas of unmet needs

The Ontada Enterprise Real-World Data Product, specifically with the granularity and details of curated data, helps in understanding unmet needs and answers research and business questions. With the availability of early-stage, where some of the promises of immunotherapy and other therapies are moving, this product will create evidence to support your research strategy across the entire product life cycle, including Drug Discovery, Pre-Clinical Research, Clinical Development and Pre-launch and Launch.

## Ontada by the Numbers
